Dear Recruiting Team,

I would like to express my interest to join **Mathworks** as **Application Support Engineer**. I am an experienced Software Developer seeking a full-time opportunity starting **May 2017**, specializing in developing in Python programming language and building automation tool framework. I would like to express my interest in the Database Engineer at Visa. I am an experienced Software Developer, specializing in developing in Python programming language and building automation tool framework.

I am completing my Master's degree in Computer Science at Northeastern University, and hence seeking a full-time opportunity starting May 2017. My academic qualifications and past experiences make me an ideal candidate for this position. Please accept this email as part of my application.

I have worked as an Internet Protocol OS Engineering intern for 8 months at Ericsson where I worked extensively on developing an internal tool in Python, that will automate the workflow of L2-L3 developer. Prior to that, I have 3 years' experience as Software Engineer with Aricent Group where I was involved in development, debugging and testing of VOIP application based on Megaco Protocol and proposed automation testing framework using Python.

As a candidate, I bring team work experience, strong communication skills and ability to learn quickly to the table. I love challenging projects and I have learned a lot from my academic projects. For example in Fall 2015 I proposed design for secure instant messaging system and implemented using the Secure Remote Protocol (SRP) and Needham-Schroeder public key protocol. I was exposed to network threats and network security concepts in this project. Northeastern has provided my great platform to be a part of extraordinary projects, where I am also currently working as Teaching Assistant for the graduate course Managing Software Development.

I created several new open source projects on my own including games, plugins and web app that you can check it out at my github account www.github.com/axeish.

Hope to hear about my application soon.
Thanks.
Ashish
